

Schulzentrum Zell am Ziller

"Functional redevelopment": What at first sounds like a time-conditioned structural necessity, has – in the case of the Schulzentrum Zell am Ziller – turned out as an exciting construction project. Above all, it offers pupils the opportunity to spend a considerable part of their young lives in an inspiring atmosphere, where they can study and make music.

Hit the right note

The guiding principles for this project in Zillertal Valley, Tyrol, were architectural virtues such as transparency and openness. To meet the needs of the students and the faculty, a contemporary school building was constructed in front of the original school, which was built in 1968. The new structure, featuring a broad and open formal language, easily adapts to the alpine landscape. In addition to its function as a practice and training place with a focus on music, it also provides space for events and meetings.

Alpine fit

The reduced but refined design language lets the building flow from the inside outwards and vice versa. The welcoming foyer, a gymnasium lowered to the split level, a panoramic terrace in the shape of a walk-on roof and other architectural surprises make a visit to the center an everyday experience. Concrete, many glass surfaces and warm wood hues create a suitable and sustainable environment.

Project description	<u>Renovation and extension of a school building including middle school, music school and social clubs</u>
Location	Zell am Ziller, AUT
Client	Hauptschulverband Zell am Ziller und Umgebung
Architecture	Architects Collective / Bernard Eder
Competition	2011 (1 st prize)
Planning services	Design / detail planning / bid & tender / costs / supervision
Planning	2010 -2011
Construction	2011 - 2012
Floor area	7.900 m ²

Vienna, December 2018
